ALL ACROSS AMERICA RENTALS

RESTROOM TRAILER RENTALS
COAST TO COAST
WIND · SOLAR · UTILITY-SCALE CONSTRUCTION

Restroom trailers, handled start to finish.

One call. One point of contact. Trusted local crews near every site, managed by us, so your project team can stay focused on the work.

Nationwide delivery | Four-season winterized | Woman-owned

AT A GLANCE

4 to 11 stalls

A full fleet range, plus custom ADA-accessible units on request.

Four-season ready

Winterized as standard. Optional Arctic package for deep-freeze sites. See page 3.

Portable or connected

Run fully self-contained, or hook up to site utilities for yards.

24/7 priority dispatch

Round-the-clock response with the Turnkey Package.

WHY PROJECT TEAMS CHOOSE US

01

One call, one answer

Scheduling, servicing, supplies, and follow-up all run through a single point of contact. Your team spends time on the build, not on coordinating vendors.

02

Local crews, national accountability

Trusted local crews near every site, managed by us. You get local response without juggling local vendors, wherever the project is.

03

Ready for any season

Every unit ships with a four-season winterized package, so crews have a clean, comfortable facility from the first frost through peak summer.

RIGHT-SIZED FOR YOUR CREW

Eight sizes. One standard of care.

Every unit is self-contained, winterized, and serviced by the same managed program. Send us your headcount and schedule and we will recommend the setup.

MOBILE JOB-SITE SIZES

4 STALL

4-Stall Trailer MOST POPULAR

Our most popular size for job-site mobility. A flexible fit for growing crews and shifting work areas. Choose semi-private or private stalls.

5 STALL

5-Stall Trailer

A step up from the 4-stall for growing crews and busier sites.

6 STALL

6-Stall Trailer

Built for larger crews and heavy daily use, with a durable fiberglass shell.

7 STALL

7-Stall Trailer

Large-crew capacity with a flexible floor plan.

LONG-TERM SITES AND YARDS

8 STALL

8-Stall Trailer RECOMMENDED

Room for big crews on long-term sites, ready to connect to water and power.

9 STALL

9-Stall Trailer

Built for yards and permanent setups with long-term utility connections.

10 STALL

10-Stall Trailer BEST LONG-TERM VALUE

Built for yards with utility hookups, and our best value for permanent and long-term placements.

11 STALL

11-Stall Trailer

Maximum capacity for permanent or long-term placements, built for yards with utility hookups.

How we size your site

Each toilet or urinal counts as one stall. Most people use a restroom about once every four hours, and a few things move that number:

- Crew size and shift length
- Weather and time of year
- Food and drink on site
- Breaks that overlap

Send us your headcount and schedule. We will recommend the right setup.

Need something specific?

Custom ADA-accessible units are available on request, along with smaller sizes for short-term or low-usage needs. Floor plans for every size are on our website, and full specifications are available on request.

Winter-ready, standard on every unit

Every unit includes our four-season winterized package. Deep-freeze or remote site? Ask about the optional Arctic package. Steady power is the key to freeze protection, and we plan it with you.

See the winter guide →
Page 3

WINTER-READY BY DESIGN

Keep your units running when it freezes.

Preparing before temperatures drop prevents frozen lines, damaged fixtures, and lost crew time.

HOW THE PROTECTION STEPS UP AS IT GETS COLDER

ABOVE ABOUT 40°F

Heat pump and A/C heat strips

Take the chill off while it stays mild. They are not designed to protect plumbing.

THE TIPPING POINT

~40°F

Your winter package takes over

The unit's four-season winterized package protects the plumbing. It depends on steady power and heat.

PROLONGED SUB-FREEZING

Arctic package, optional

Deep-winter protection for winter construction and remote sites. Continuous power is the key, and we plan it with you.

1 Staying in service

Keep the heat on, all winter

Never lose heat

A unit has to hold enough heat through the whole freeze. A loss of power or heat can freeze plumbing and damage equipment.

Expect more power than summer

Winter heating often needs additional power connections. Confirm every required connection is in place and live before temperatures drop.

Keep cords as supplied

Please do not combine connections, add adapters, or lengthen the supplied cords. They lose voltage and weaken heating.

Leave the thermostat set

Keep it at its set temperature with the cover locked, so heat never gets switched off by accident.

IMPORTANT

If power drops, restore it right away. Do not open the mechanical area or tanks. Report any issue to All Across America Rentals.

2 Going idle

Taking a unit out of service

Drain and treat the plumbing

An idle unit needs its water system drained and RV antifreeze rated for drinking-water systems added throughout.

Every point matters

That covers supply lines, faucets, toilets, sink traps, water pumps, valves, and holding tanks. Water left in any one can freeze.

Air alone does not do it

Blowing out the lines leaves water trapped in faucets, valves, and pumps. Antifreeze protection is essential.

Right product only

Use RV or marine antifreeze made for drinking-water plumbing. Never automotive antifreeze.

BEFORE IT SITS IDLE

Winterize the plumbing before the first freeze. Contact All Across America Rentals before any unit is taken out of service.

BEFORE THE FIRST FREEZE

- [ ] **Power is live** — Every required power connection is in place and working.
- [ ] **Cords untouched** — No adapters, splitters, or extended cords.
- [ ] **Thermostat set** — Set temperature held, cover locked.
- [ ] **Idle units winterized** — Drained and treated with RV antifreeze.

MANAGED LOGISTICS

Choose how hands-on you want to be.

Start with the trailer, or hand us the whole restroom program. Every level is backed by the same equipment and the same point of contact.

BASE

Base Equipment

Just the trailer. You arrange servicing, supplies, and everything else.

BEST FOR

Teams with their own servicing vendors in place.

TIER 1

Site Baseline

Essential servicing to keep the unit running.

BEST FOR

Crews that handle cleaning and supplies themselves.

TIER 2

Site Care

Servicing plus cleaning and supplies, so facilities stay ready for the crew.

BEST FOR

Sites that want facilities kept fresh without the legwork.

RECOMMENDED

TIER 3

Turnkey Package

We manage everything, start to finish. You make one call.

- Local crews managed by us
- 24/7 priority dispatch
- On-site relocation included
- Power and water planned with you

BEST FOR

Project teams who want one call and zero vendor management.

Why most project teams land on Turnkey

Comparing the lowest line item is natural. What a line-item comparison can miss is the coordination behind it: every additional vendor is another call, another schedule, and another place for a service to slip.

Turnkey replaces that chain with one accountable partner. When a unit needs attention at 6 a.m. on a Saturday, your team makes one call and the right local crew is dispatched.

Power and water, planned with you

Reliable power is the biggest factor in keeping a unit running, in every season, and every unit needs a dedicated water supply. Yard units connect to utilities; mobile units are refilled by fresh water trucks.

We walk you through the setup personally, and can manage it for you.

FROM REQUEST TO READY

1

Send the basics

Project location, start date, headcount, and schedule.

2

We recommend a setup

The right unit size, utility plan, and service level for your site.

3

Delivered and set up

Trailers arrive on your schedule and are placed and ready for the crew.

4

Serviced all project long

Pumping, water, cleaning, and supplies at your chosen service level, with one contact for it all.

BUILT ON SERVICE

The people behind the trailers.

Renewable construction is moving fast, and the need for better on-site support is only beginning to be met. I started All Across America Rentals to help meet it, by raising the standard of what crews experience on site every single day.

I have spent twenty years in client-facing roles, and it taught me one thing above all: great service means people never have to ask twice. That is how we run every project. You get a direct line to the person responsible, answers when you need them, and a fleet that shows up ready.

When a project team chooses us, I want the whole crew to notice the difference, and I want the next project team to hear about it.

What you can count on

- **One point of contact** from quote to pickup
- **Local crews near every site,** managed by us
- **Insured equipment.** We carry the insurance on our units
- **Four-season ready** in every region we serve
- **Flexible setups,** self-contained or utility-connected
- **Woman-owned** and personally accountable

QUICK ANSWERS FOR PROJECT TEAMS

How often should units be cleaned?

We recommend weekly cleaning on construction sites, where dust and dirt build up fast. Site Care and Turnkey handle it for you.

What does a unit need to run?

A power source (or a generator where there is no electric service) and a dedicated water supply. We plan both with you before delivery.

Can units move as the work moves?

Yes. Portable units can be relocated as work areas shift, and the Turnkey Package includes an on-site relocation, coordinated by us.

Do you serve remote and rural sites?

Yes. We deliver nationwide, including remote locations, with local crews near every site.

Can units run below freezing?

Yes. Every unit is four-season winterized, and it relies on steady power and heat. Our winter guide on page 3 covers the details.

What should I plan for in winter?

Confirm every power connection is live before the first freeze and leave the thermostat set. An optional Arctic package covers deep-freeze sites.

REQUEST A QUOTE

Tell us about your site. We will take it from there.

A short message is all we need to recommend a setup. Include:

- Project location and start date
- Expected duration
- Headcount and shifts
- Power and water available on site
